

Expansion Board Usage Guide

1) Please refer to the relevant tutorial of the expansion board to correctly connect the wires. Incorrect wiring may cause short circuits or damage to the devices.

2) If you use the monocular camera version and the servo cannot be controlled, check if the jumper cap of the servo is connected correctly.

- 3) The battery connector uses reverse insertion prevention. If it cannot be connected to the battery, do not force it to avoid damaging the interface.
- 4) Charge the lithium battery with the provided charger.
- 5) The charger indicator will light up green when it's plugged into the socket but not yet connected to the battery.
- 6) The battery should be stored in a cool and dry environment to avoid shortening the battery life due to overheating, dampness, and other conditions.
- 7) Ensure that the expansion board and connectors are free from physical damage, such as squeezing, pulling, or impact.
- 8) Keep the expansion board clean and avoid humid and dusty environments, which may cause short circuits or corrosion.
- 9) In case the robot won't be used in a long period time, please store the expansion board in a dry and cool place, avoiding direct sunlight and extreme temperatures.
